

Running the Commission Ledger

Everything an admin needs to run a pay week: the four screens, the six things you can do, how a plan change is scheduled, and the rules that catch people out.

Getting in

Go to vivid-dashboard.onrender.com/commissions and sign in with your Vivid Google account. Anyone not named above gets an access-denied page, reps included.

The week

Runs pay every **Friday**. A run covers seven closing dates ending ten days before its payday — so there is always a gap between a deal closing and its commission going out, and that gap is your working time.

ANY DAY

Work the queues

Open **Pay runs** and look at the strip: change orders, deals on hold, adjustments, data checks. Anything needing a decision is counted there. Clearing it as you go beats doing it all on Thursday.

THURSDAY

Settle the run before 8:00 AM

The run freezes automatically at **8:00 AM Mountain on Thursday**, the day before payday. Holds, adjustments and change orders have to be in before then. After the freeze the run is read-only and anything new rolls into next week.

THURSDAY

Freeze it and export

Check the total, press **Freeze this run**, then **Export CSV** for payroll — one row per person with commission, bonuses and adjustments broken out. Freezing captures what every deal was paid on, which is what lets later contract changes show up as corrections instead of quietly rewriting the run.

FRIDAY

It pays

Nothing to do. The run shows as paid and becomes part of the record.

The four screens

PAY RUNS

What goes out, and when

The default screen. Total payable, who's getting what, and the review strip with everything awaiting a decision. Use the arrows beside the date to step between runs — back through what's been paid, forward through what's coming. Every run is browsable; only the open one is editable.

DEALS

Every deal, searchable

Search by customer or address. Filter to won, lost, self-gen, on hold, or deals with a change order. Click any deal to open it — contract value, what it was paid on, both reps, its pay run, and the controls for holding it.

PEOPLE

One person's whole picture

A rep's statement for the selected run, their deals, their recruiting tree, and their Vivid Adder quarters. This is the screen to open when someone asks why their cheque is what it is.

PLANS

The rates, and what changes them

Commission rates, recruiting percentages, the override, and the summer bonus tiers — plus the queue of plan changes waiting to start. Editing a rate here changes a working copy and recalculates every screen, so you can price a change before committing; nothing is saved until you schedule it from a date. See *Changing the plan*.

The nine things you can do

Hold a commission

Open the deal, choose a reason, and hold the setter leg, the closer leg, or both. A held leg stays out of every run until released, and shows as withheld on that person's statement with the reason. Reasons are fixed: financing not approved, awaiting signed change order, job cancelled, rep eligibility under review, contract value in dispute, install on hold, or other.

Release a hold

Releasing pays it in the **next open run**, never back into a run that has already gone out.

Mark a held leg as already paid

Sometimes payroll has already cut the money some other way. Releasing it would pay the person twice, and leaving it held means the leg sits on the list forever with no record of why. **Already paid** is the third way out: pick the payroll cycle it actually went out in, and the leg is settled. It never pays again.

The amount is reported against that run but *not added to its total*. A frozen run keeps the figures it went out with, and this money never passed through the ledger at all. You'll see it as its own line beneath the run, on the rep's statement, and in a **Paid outside** tab beside the hold list — so nothing looks missing, and nothing gets quietly restated.

Only runs that have already frozen are offered. Paying into the open run is what Release does, and that button is right beside this one. If it was paid before the ledger existed, choose *Before the ledger started*. Changed your mind: **Reopen** puts it back on hold.

Enter an adjustment

Money for one person that isn't commission. Positive: bonus, manual commission, reimbursement. Negative: chargeback, deduction, advance repayment. The reason you type shows on their statement, so write it for them, not for you. Anything over \$100,000 is refused as a typo.

If the run you're aiming at has frozen, it lands in the next open one automatically and the button tells you which.

Move an adjustment to a later run

An entry that should simply wait for the next cycle does not need to be deleted and typed again. **Move to** sends it to a later run, and it keeps its amount, its reason and who entered it. The row then says where it came from, so the trail survives.

Forward only, and never into a run that has frozen. Giving new money to a payroll that has already gone out is the one thing this must never do, and both the page and the server refuse it.

Apply — or don't apply — a change order

When a contract value moves in Odoo by more than \$15 after commission was paid, that deal appears in the change orders queue by itself. **Apply** recalculates both commissions, both levels of recruiting bonus and the override, and pays or claws back *only the difference* in the next open run. **Do not apply** records that you looked and the difference stands — it leaves the queue, keeps the variance visible under "Not applied", and can be reopened.

Use "Do not apply" freely. A queue that never empties stops being read, and that's how one that matters gets missed.

Claw back a cancellation

A cancelled job is a change order taken to zero, so it arrives in the same queue — marked **Cancelled**, with the buttons reading **Claw back** and **Leave it**. Clawing it back reverses everything that was paid on that deal: both commissions, both levels of recruiting bonus, and the override, across every person who received any of it. It lands in the next open run.

The ledger finds these on its own. In Odoo a cancellation is not a stage — the job goes back to Leads, is archived, and is given the lost reason *Customer Cancelled*. That is the signal the dashboard watches for.

A job cancelled before its run ever paid raises nothing, because there is nothing to recover. Only cancellations where money actually went out appear in the queue.

Deduct a Vivid Adder

An adder that should not have been on the job comes off **here, not in Odoo**. The contract value stays exactly as the customer signed it — invoicing, Vendo and every report read that field, and none of them should be told a commission decision. What the deduction moves is the figure commission is worked out from, and the closer's adder balance, out of one event.

Open the deal, scroll to **Vivid Adder**, pick how many come off and why, and press **Deduct**. Everything follows from there: setter and closer commission, both levels of recruiting bonus, the override at every level, and the summer weekly bonus if that week qualified. There is no second step to remember and no task to set for next month.

What happens next depends on whether the money has already gone out. If the deal's run has not been paid, it simply pays on the lower figure the first time. If it has, the deduction arrives in the change orders queue like any other — every affected person named, every amount worked out — for you to apply or not apply. The adder half behaves the same way: a quarter that has not been paid yet just pays \$500 less, and one that has already been paid keeps the figure it went out with while the \$500 is recovered in the next open bonus run.

Put it back reverses all of it the same way round.

Freeze a run

Locks it. Rates, contract values, holds, adjustments and the quarterly Vivid Adder balances are captured as paid, and the run becomes read-only.

What it works out on its own

None of this is typed in. It all follows from the deals.

PAID	RATE	WHEN IT PAYS
Closer commission	9%	the deal's own run
Setter commission	5%	the deal's own run

PAID	RATE	WHEN IT PAYS
Hourly setter	1%	the deal's own run
Summer bonus · 2 deals in a Sun–Sat week	+2%	next month's bonus run
Summer bonus · 3 or more	+4%	next month's bonus run
Recruiting, level 1 · self-gen / closer / setter	1.5% / 0.75% / 0.75%	next month's bonus run
Recruiting, level 2 · self-gen / closer / setter	0.5% / 0.25% / 0.25%	next month's bonus run
Regional and VP override	4%	next month's bonus run
Vivid Adder	\$500 each	two quarters later

Bonus runs are the first Friday after the 10th of the following month. If the 10th is itself a Friday, it's the Friday after.

Vivid Adder is a count on the deal in Odoo, not a dollar amount. Each one is worth \$500 to the closer. A quarter's total is paid as a single adjustment line in the first bonus run two quarters later — Q1 pays in July, Q2 in October. You'll see the line already sitting in the run that paid it; nobody has to remember to add it.

Changing the plan

Rates are not edited in place. A plan change is **scheduled to start on a date**, and every deal is paid at the plan in force *the day it closed*. So a change can be announced weeks ahead without disturbing anything in flight, and no run that has already been paid can move.

Scheduling one

Open **Plans** and change the rates you want. They behave as a working copy — every figure on screen recalculates, so you can price the change before committing to it. Then press **Schedule a change**, pick the start date, write a line saying what changed, and save.

The whole set goes together as one snapshot: closer, setter and hourly commission, both recruiting levels, the override, and the summer bonus tiers. There is no scheduling half a plan.

The queue

Anything scheduled sits at the top of Plans with its start date and its rates, marked **Scheduled** until the date arrives and **In force** after. A scheduled change can be **cancelled** right up until it starts — nothing has been paid at those rates yet. Once it has started it stays on the record like everything else.

A PLAN CAN ONLY START IN THE FUTURE

The date has to be later than today, and the ledger refuses anything else. Deals have already closed under the current plan, and their rates cannot be moved out from under the reps who sold them.

Worked example. Closer commission goes from 9% to 10% on 1 October. A \$20,000 deal closing **30 September** pays the closer **\$1,800**. The same deal closing **1 October** pays **\$2,000**. Both are paid in October runs — what separates them is the closing date, not the payday.

Four rules that catch people out

A HOLD CANNOT CLAW MONEY BACK

Holding a deal that has already paid does not recover the money, and does not change what that run reported paying. It only stops the leg being paid again. To actually get it back, enter a **chargeback** against the rep in the next open run. The deal screen says this to you when it applies.

A FROZEN RUN NEVER CHANGES

Once a run is frozen, nothing you do afterwards edits it. Corrections roll forward into the next open run. This is deliberate: the July run has to keep saying what July actually paid, or reconciling against the bank becomes impossible.

WHAT A DEAL IS PAID ON GETS PINNED AT THE FREEZE

Before its run freezes, a deal follows whatever Odoo says the contract is worth — so a correction on Tuesday is simply right on Wednesday. At the freeze that figure is written down for good. Any change after that becomes a change order rather than a silent restatement.

ODOO IS THE SOURCE, ON A FIVE-MINUTE DELAY

Deals come from the CRM and refresh every five minutes. A deal marked won in Odoo right now may take a few minutes to appear. If Odoo stops answering, the ledger keeps showing the last good read and says so in red rather than showing you an empty page.

When something looks wrong

A deal isn't showing up

Check it's marked won in Odoo with a closing date. Only won deals closing from 1 January 2026 onwards are in scope. If it's just been marked won, give it five minutes.

A cancelled job isn't showing a clawback

Check that its lost reason in Odoo is *Customer Cancelled* — that is the signal the dashboard reads. And if the job was cancelled before its pay run went out, there is correctly nothing to claw back.

Payroll paid a held leg anyway

Don't release it — that would pay it a second time. Open the deal, click **Already paid**, and pick the cycle it actually went out in. The leg stops chasing, the amount shows against that run without being added to it, and the reason stays on the record.

A rep says their pay is wrong

Open **People**, find them, and set the run to the one they're asking about. Their statement breaks out commission, bonuses, change orders and adjustments line by line, with the reason on each. Nine times in ten the answer is a hold or an adjustment with its reason already written on it.

A red banner says Odoo isn't responding

Holds and adjustments cannot be saved while it's up, and what you're looking at is the last good read. Reload in a minute. Don't freeze a run against figures carrying that banner.

Something saved, then came back

It didn't save. Every change goes to Odoo, and if that fails you get told and the screen puts itself back. Try again; if it keeps failing, that's one to report rather than work around.

The numbers look off across the board

Two runs are the reference: **21 August 2026 pays \$48,836.20** across 19 deals, and **14 August 2026 pays \$59,523.20** across 22. Both come from the original workbook. If either has moved, something is genuinely wrong and it needs looking at before anyone is paid.

Where the record lives

Every hold, release, adjustment, change order decision and run freeze is written to Odoo as its own record, with a plain-English note on the opportunity — or on the Commission Ledger journal record for anything not about a specific deal. Nothing is stored only in the browser.

That means Odoo's **Commission Event** list is a complete audit trail, readable without opening this dashboard at all. It answers "why was this person's cheque short in August" with a name and a date against every decision.

REVERSIBLE, NOT EDITABLE

Nothing is ever deleted or overwritten. A hold is released or settled, a settled leg is reopened, a change order is reopened, an adjustment is moved or removed — each is a new record on top of the old one. You can always see what was decided, when, and by whom.

Revision 4 · 14 September 2026 — adds paying a held leg outside the ledger, and moving an adjustment to a later run

Revision 3 added cancellation clawback · revision 2 added scheduled plan changes

Rates as configured on 8 September 2026 · closer 9%, setter 5%, hourly setter 1%, override 4%

Reconciled against the source workbook: 21 Aug \$48,836.20 · 14 Aug \$59,523.20

Access is set in `api/commissions_people.json`. Reps are switched off; ask before turning them on.
