VIVID WINDOWS · COMMISSION LEDGER

Deducting a Vivid Adder

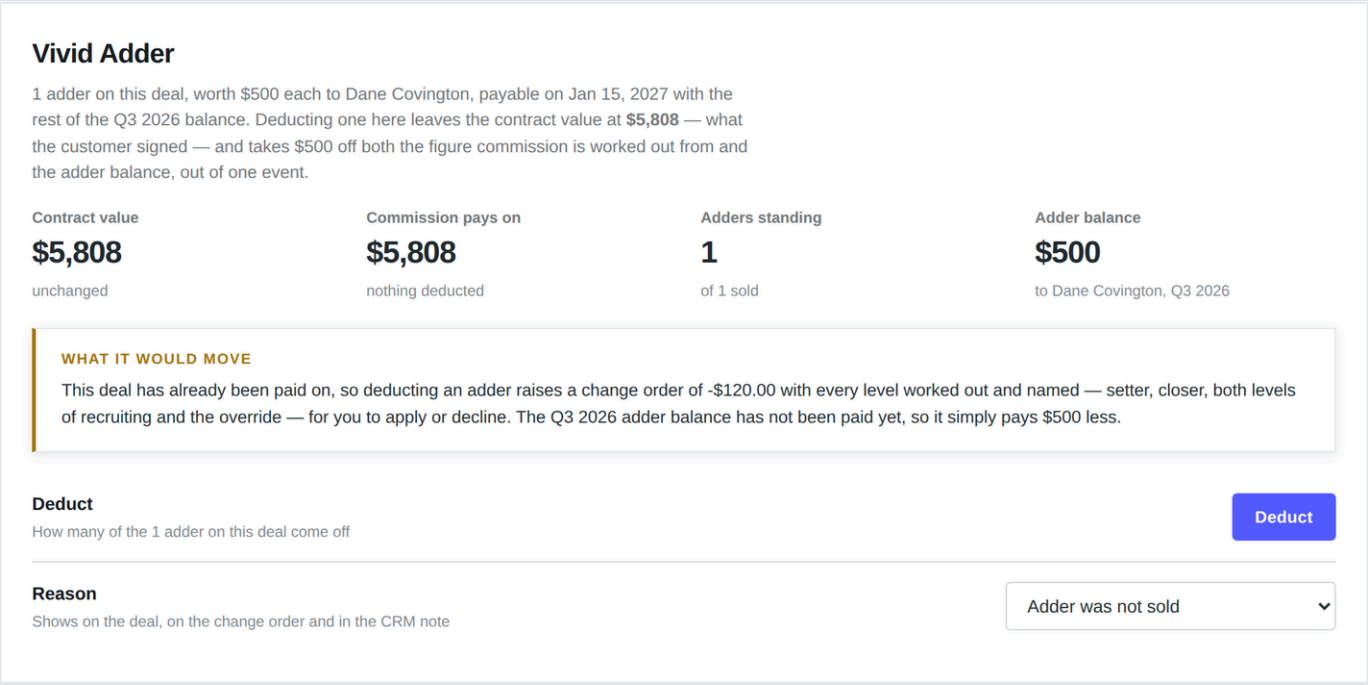

The customer signed for $10,500, so that is what the contract says. Commission pays on $10,000. Both are true at once, and it takes one click. This is built and in the dashboard now.

CONTRACT IN ODOO	COMMISSION PAYS ON	COMMISSION AND BONUSES	ADDER BALANCE
$10,500	**$10,000**	**−$120.00**	**−$500.00**
unchanged — it is what was sold	one Vivid Adder deducted	six levels, setter to Director	the closer’s quarterly payment

---

The control

On any deal carrying an adder there is now a **Vivid Adder** card. It says what is on the deal, what it is worth, who it pays and when, and — before anything is committed — exactly what deducting one would move. Pick how many, pick a reason, press **Deduct**.

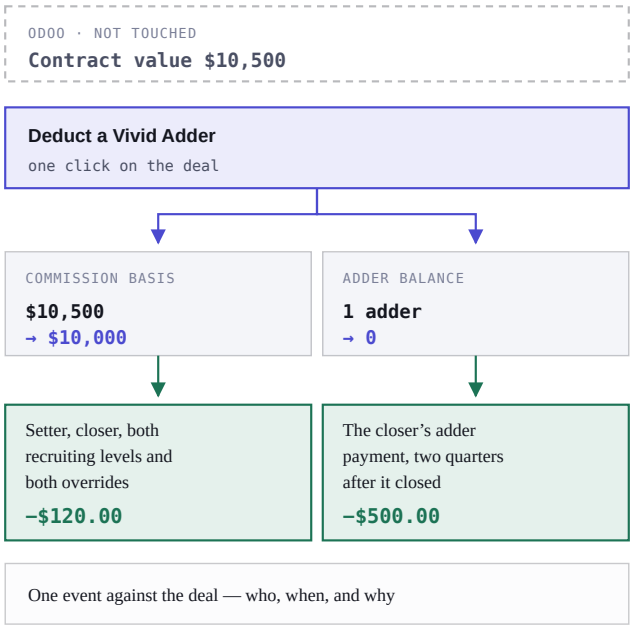

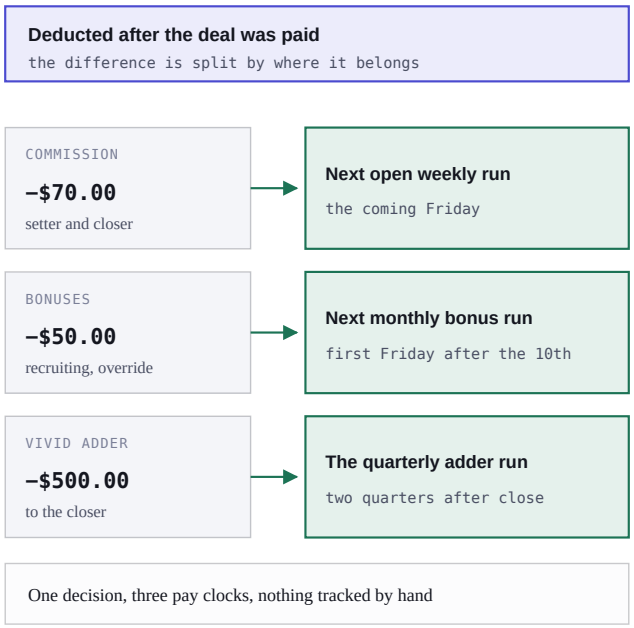

A real deal in the ledger. The two numbers sit side by side — the contract value, and what commission is worked out from — and the card says which way the money will move before anyone commits to it.

The contract value and what commission pays on are two different numbers

They are usually the same, which is why they look like one thing. But the ledger already keeps them apart — it is how a frozen pay run still remembers what it paid on after a contract value moves months later.

That seam is the answer. Leave the contract at $10,500, where invoicing, Vendo and every report can rely on it, and record separately that **this deal earns commission on $10,000, because one Vivid Adder was deducted**.

One action, both halves. The two effects come from the same click, so they cannot drift apart — which is the thing that would otherwise get forgotten.

Commission and bonuses do not move on the same clock. Commission belongs to a weekly run, recruiting and override to a monthly one. The ledger already sends each half where it belongs.

Where each piece of money lands

If the deal has not been paid yet, none of this is a correction — the run simply pays on $10,000 the first time and there is nothing to apply. Everything below is what happens when the money has already gone out.

LEVEL	RATE	ON THE $500
PAYS IN THE NEXT OPEN WEEKLY RUN		
Setter commission	5%	−$25.00
Closer commission	9%	−$45.00
Commission		**−$70.00**
PAYS IN THE NEXT MONTHLY BONUS RUN		
Recruiting level 1, on the closer	0.75%	−$3.75
Recruiting level 1, on the setter	0.75%	−$3.75
Recruiting level 2, on the closer	0.25%	−$1.25
Recruiting level 2, on the setter	0.25%	−$1.25
Override · Team Manager	4%	−$20.00
Override · Director	4%	−$20.00
Bonuses		**−$50.00**
Commission and bonuses together		**−$120.00**

Six of those eight lines are people who had nothing to do with the deduction and would never think to check — two levels of recruiting above both reps, and the Team Manager and Director for the region. That is the part worth not doing by hand.

The closer's **$500 adder** comes off separately, from the same click, against the quarterly adder payment two quarters after the deal closed.

Why not simply edit the contract value

DROPPING IT TO $10,000	RECORDING THE DEDUCTION
Makes Odoo say something untrue	**Says exactly what happened**

$10,500 is what the customer signed. Invoicing, Vendo and every report read that field, and none of them should be told a commission decision.

A value that quietly falls by $500 is also ambiguous. Was that an adder, a discount, or a typo being fixed? Six months later nobody can tell.

“One Vivid Adder deducted, by Abipsha, on 17 September.” It reads as a decision, and is distinguishable at a glance from a genuine contract change.

And it reverses. Put the adder back and the difference flows back through the same queue, with no second edit to remember.

How it is used

1. **Deduct the adder on the deal, not in Odoo.** One control, one reason, both halves handled. The contract value stays where it is, and the reason shows on the deal, on the change order, and in the note that posts back to the CRM.

2. **If the deal has already been paid, check the change orders queue before the Thursday freeze.** The deduction is waiting there with every affected person named and every amount worked out. Apply it, or record that we are letting it stand. If the deal has not been paid, there is nothing to do — the run pays on the lower figure the first time.

3. **Nothing to track by hand.** No task for the override, no task for the recruiting bonus, no note about the adder balance. They come out of the one click, which is the whole point. **Put it back** reverses all of it the same way round.

> BUILT
>
> The **Deduct a Vivid Adder** control writes one event that lowers the commission basis and the adder balance together. The subtraction goes in the single place that answers “what is this deal worth for commission” — and everything downstream already flowed from that: the six levels, the split between the weekly and monthly runs, the change orders queue, the quarterly adder line, and every export. Nothing else had to be taught about adders.

AND THE HOLE IT WOULD HAVE LEFT IS CLOSED

The quarterly adder figure used to be worked out from the count as it stood right now, and freezing a run did not pin it — so removing an adder from a quarter already paid would have quietly changed what that quarter showed. Freezing a run now pins each closer’s quarterly balance the way it already pinned contract values. A quarter still ahead simply pays $500 less; one already paid keeps the figure it went out with, and the $500 comes back as its own line in the next open bonus run.

Worked example: a $10,500 contract with one Vivid Adder, a separate setter and closer, in a region with a Team Manager and a Director.
Rates as configured on 17 September 2026 · closer 9%, setter 5%, override 4%, recruiting 0.75% and 0.25% · one Vivid Adder is $500.
